USING H5P PLATFORM IN TEACHING ENGLISH FUTURE POLICE OFFICERS

Modern education requires introduction of new pedagogical technologies. Among the primary tasks facing universities at the current stage is the involvement of a wide variety of technical means to increase the effectiveness of education. Innovative teaching technologies should be used in the process of training specialists in institutions of higher education. Studying a foreign language is an important component of various profiles students' professional training.

Innovative technologies are aimed at improving the quality of education, students' interest in learning. They make it possible to differentiate and individualize the training process. These technologies form internal motivation for active perception, assimilation and transfer of information. They contribute to the formation of communicative features of students, activate their mental activity.

The essence of interactive technologies is that studying occurs through the interaction of all participants of educational process. Formation of teaching aids is one of the main tasks facing the teacher. A successful solution to this issue in a certain way depends on the level of professional and pedagogical culture of the teacher, professional, scientific and technical training, as well as the ability to use information technologies in the process of teaching the discipline.

Modern technologies are distinguished by the fact that they do not reject traditional teaching methods. The choice of the most appropriate teaching technology in each specific case will depend on the goals, tasks,

requirements of education, as well as on the technical base and readiness of the participants of the educational process.

Course materials must be adapted to new tasks and forms of work in the e-teaching system. A certain range of information technologies intended for use in the educational process involves the use of universal software tools that allow expanding the possibilities of the educational environment and bringing the productive activity of students to a new level. The usual traditional methods will not work and will not be effective if they are simply automatically transferred to a new online training course. The course should be redesigned with extensive use of video and audio materials.

It is interesting to consider the use of the H5P platform for creating various interactive tasks in English in the discipline «Foreign language for professional purposes» on the topic «Crime classification» for cadets of specialty «Law» [1]. Pre-text tasks help to prepare cadets for the perception of new information in the educational text. For introducing new vocabulary an exercise may be used: listen to new words and read them made through H5P tool «Speak the Words» (*offence [əˈfɛns], punishable [ˈpʌnɪʃəbᵊl], alibi [ˈælɪbaɪ]* etc.). The second task involves matching English and Ukrainian equivalents «Drag the Words» (*to cause bodily injuries – нанести тілесні ушкодження*, *forced entry – проникнення із застосуванням сили* etc.). Work on the text is carried out on the basis of the material placed in such exercises, as «Information Wall», «Cornell Notes». Post-text tasks are represented by the following exercises: to complete the sentences «Fill in the Blanks»; to select the words that mean the name of crimes «Mark the Words» (*murder, rape, assault, robbery forgery, counterfeiting* etc.); to choose correct option from multiple choice «Column»; to find the answers «Guess the Answer», «Single Choice Set».

The use of innovative technologies helps to form abilities and skills of spoken language, as well as to teach the vocabulary and grammar, ensuring real interest and efficiency. The future of our education is based on innovative teaching technologies.
